Introductory text

The conditions for protection, the protective regimes and the applicable sources of IHL differ depending on whether a person finds themselves in the power of a party to the armed conflict or whether they are affected by hostilities. Rules of the first regime are traditionally referred to as ‘Geneva Law’ because such rules are mainly codified in the Geneva Conventions, while the rules of the latter are traditionally referred to as ‘ Hague Law’ because they were initially codified in the Hague Regulations. Currently, however referred to as ‘Geneva Law’, the rules on the conduct of hostilities are mainly found in Protocol I, and in parallel in customary IHL applicable to both IACs and NICs.

According to the protective regime governing the conduct of hostilities, civilians and, to a much more limited extent, combatants and fighters, are protected against attacks and effects of hostilities by an adversary to the conflict, in whose power they are not. The first requirement of those rules is that means only that is, weapons) and methods (in other words, tactics) of warfare that are not prohibited by IHL, may be used. Second, only combatants, fighters, civilians directly participating in hostilities and military objectives may be directly targeted. Third, even if an attack is directed against a lawful target, its incidental impact on civilians and civilian objects (in other words, collateral damages) may not be excessive in relation to the anticipated military advantage gained from eliminating or neutralizing the target. Finally, all feasible precautionary measures must be taken to spare the civilian population and civilian objects from the effects of war. This protective regime is – for the most part – very similar in both IACs and NICs.

In contrast, the legal regime protecting persons who are in the power of a party to the armed conflict differs substantially depending on whether the armed conflict is an IAC or a NIC. In the former, protection is mostly afforded to ‘protected persons’. Thus, it is only when the person who is in the hands of a party to the conflict qualifies as a ‘protected person’ under one of the four Geneva Conventions. If so and depending on the individual’s specific situation and status, an individual is protected by one or more of the protection regimes established by the Conventions for the wounded and sick military on land (Convention I), the wounded, sick and shipwrecked at sea (Convention II), prisoners of war (Convention III) and civilians (Convention IV). The protective rules of Convention IV are further subdivided into rules protecting (mainly enemy) foreigners in a belligerent State’s own territory and rules applicable to occupied territories that not only protect the population of such territories but also govern the occupying power’s administration of the territory. Individuals who do not qualify as a ‘protected person’, however, only benefit from a more limited set of fundamental guarantees. In NICs, civilians and fighters in the power of the enemy traditionally benefit from the same protection, but it is now argued that IHL provides an inherent legal basis to the latter. Similarly, to the protection of objects, it is important to distinguish between the rules of Geneva Law that protect objects against destruction by the party controlling them and the rules of Hague Law that protect objects against attacks by the adversary of the party controlling the objects. To take a concrete example, the destruction by a party to an armed conflict of houses in territory it occupies or controls will be governed by Geneva Law, and not by the rules on the conduct of hostilities. This means that such destruction is prohibited unless imperatively demanded by the necessities of the conflict, while the concept of military objective, crucial for the conduct of hostilities, is irrelevant here.

The demarcation between rules protecting persons in the power of an adverse party and the rules protecting persons against the effects of hostilities is obviously not absolute. Indeed, the rules on humanitarian assistance not only benefit civilians, POWs, military wounded and sick in the power of a party but are also equally addressed to any adversary of that party to the extent all parties to a conflict must permit the passage of relief convoys and humanitarian organizations. Additionally, on the battlefield or the frontlines, it may prove difficult to determine whether persons are in the power of the party affecting them and thus which regime should apply. Similarly, it is also sometimes controversial whether certain prohibitions in IHL, such as the prohibition of murder in Common Article 3, applies only to summary executions of persons in the power of a party or whether it also extends to the conduct of hostilities.

Despite these nuances, the distinction between the rules falling under Geneva Law and those rules contained within Hague Law is important as it has a practical impact in several respects. First, the complicated question of who qualifies as a protected civilian either on the basis of nationality or arguably allegiance is relevant only to the application of Hague Law. Second, the difficult debates regarding what constitutes direct participation in hostilities in both IACs and NICs and who is a civilian in a NIC are irrelevant for Geneva Law as such questions only concern the application of Hague Law. Third, the distinction between IACs and NICs is much more important for Geneva Law than for Hague Law because protection in IACs largely depends on status. Fourth, a party may conduct hostilities only against persons and objects that are not in its power. In contrast, the use of force against persons in the power of a party is governed by the relevant human rights rules relating to law enforcement operations.

A further and most important reason why Hague Law has still to be distinguished from Geneva Law, is that it is much easier to establish violations of Geneva Law (for example, whether a person has been tortured, a person has been raped or a house in an occupied territory has been destroyed) than it is to determine violations of Hague Law. Therefore, it is much easier to show that Hague Law has been violated than it is to determine violations of Hague Law. What counts for the Hague Law is not what was destroyed or who was killed or injured but what and who was targeted. To target civilians or civilian objects violates IHL. Whether an attack is lawful under Hague Law does not depend on the results of the attack but rather on an ex ante evaluation by the attacking party. Establishing whether an attack violated Hague Law requires a complex analysis of several legal factors, including the status of the targeted person or object, whether such person or object was the actual target, the actual or intended use of the targeted object, the military value to the attacker in eliminating the targeted person or object in relation to the extent (if any) of incidental effects upon civilians and whether the attacker took all feasible precautionary
measures in attack to avoid or minimize incidental effects upon civilians. Assessing these legal factors necessarily requires knowledge of the military plans of both parties. Parties, however, do not make such information public and they do not have an obligation to do so. Fact-finding bodies and the media therefore either neglect the fundamentals of the law or come only to very tentative conclusions concerning the legality of a given attack. Criminal tribunals do not even have this option, which may explain the limited number of convictions for violations of the Hague law.

Application of Geneva Law rules or enquiries into questions relevant only under Geneva Law when an issue of conduct of hostilities arises and vice versa is one of the most frequent mistakes committed by students, practitioners, the media and courts when determining the legal rules applicable and any violation(s) in relation thereto.

4. Definition of military objectives

P I, Art. 52(2) and (3) [CIL] Rule 8

Introductory text

When the focus of the law on the conduct of hostilities shifted from the prohibition to attack undefended towns and villages to the rule that only military objectives may be attacked, the definition of military objectives became crucial. The principle of distinction is practically worthless unless at least one of the categories between which the attacker has to distinguish is defined. From the point of view of the philosophy of International Humanitarian Law (IHL), it would have been more satisfactory to define civilian objects. However, because objects become military objectives according to their use by the enemy or potential use by the attacker rather than because of their intrinsic character, it was military objectives that were defined. Indeed, all objects other than those benefiting from special protection can become military objectives. By the same token, it has not been possible to draw up an exhaustive list of military objectives, although such a list would have greatly simplified practical implementation. Most definitions are therefore abstract but provide a list of examples.

Further readings:

Under the definition provided in Article 52(2) of Protocol I, an object must cumulatively meet two criteria to be a military objective.

First, the object, by its “nature, location, purpose or use”, has to contribute effectively to the military action of the enemy. “Nature” refers to the object’s intrinsic character. “Location” admits that an object may be a military objective simply because it is situated in an area that is a legitimate target. Some States have clearly stated that their understanding of the word is that a specific area of land may be a military objective if its total or partial destruction, capture or neutralization in the circumstances ruling at the time offers a definite military advantage. “Purpose” refers to the enemy’s intended future use, based on reasonable belief. “Use” refers to the current function of the object. For example, it is generally agreed that weapons factories and even extraction industries providing raw materials for such factories are military objectives, because they serve the military, albeit indirectly.

Second, the object’s destruction, capture or neutralization has to offer a definite military advantage for the attacking side. According to declarations of understanding made by some States, the military advantage anticipated from an attack refers to the advantage anticipated from the attack considered as a whole, not just from isolated or particular parts of the attack. A direct connection with specific combat operations is not considered to be necessary. An attack as a whole must, however, be a finite event, not to be confused with the entire war. What counts is that the action and the advantage have to be “military”: the political aim of victory may be achieved through violence only by using violence against military objectives, i.e., by weakening the military potential of the enemy. By characterizing the contribution as “effective” and the advantage as “definite”, the drafters tried to avoid too broad an interpretation of what constitutes a military objective. However, the exact practical implications of those terms are subject to controversy. Both criteria must be fulfilled “in the circumstances ruling at the time”. Without this limitation to the actual situation, the principle of distinction would be void, as every object could in abstracto, in the wake of possible future developments, e.g., if used by enemy troops, become a military objective.

5. Definition of the civilian population

P I Art. 50

Introductory text

The principle of distinction can only be respected if not only the permissible objectives but also the persons who may be attacked are defined. As combatants are characterized by a certain uniformity and civilians by their great variety, Art. 50(1) of Protocol I logically defines civilians by excluding them from the corollary category of combatants: everyone who is not a combatant is a civilian benefiting from the protection provided for by the law on the conduct of hostilities. As will be seen below, civilians only lose their protection from attack and the effects of the hostilities if and for such time as they directly participate in hostilities. In distinction, civilians are very important in rendering IHL complete and effective, and thereby ensuring no one may fight but not be fought, or be attacked but not defend himself/herself – a privilege and a sanction which would never be respected and would undermine the whole fabric of protection provided for by the law on the conduct of hostilities.

Thus, under this definition there is no category of “quasi-combatants”, i.e. civilians contributing so fundamentally to the war effort (e.g. workers in ammunition factories) that they lose their civilian status although not directly participating in hostilities. Indeed, in IHL there can logically be no such category. If the civilian population is to be protected, only one distinction is practicable: the distinction between those who (may) directly participate in hostilities, on the one hand, and all others, who do not, may and cannot militarily hinder the enemy from obtaining control over their country by means of a complete and effective, and thereby ensuring no one may fight but not be fought, be attacked but not defend himself/herself – a privilege and a sanction which would never be respected and would undermine the whole fabric of protection provided for by the law on the conduct of hostilities.

To allow attacks on persons other than combatants would also violate the principle of necessity, because victory can be achieved by overcoming only the combatants of a country – however efficient its armament industry and however great its politicians may be. All this obviously does not preclude military objectives, such as armament factories, from being attacked; subject to the principle of proportionality – the attack on a military objective does not become unlawful because of the risk that a civilian who works or is otherwise present in it may come to harm during the course of the attack.

If one person so defined, any number of such persons constitute the civilian population. According to proportionality as a general principle of law, the presence of individual non-civilians among a great number of civilians does not deprive the latter of the character of a civilian population; nor does it mean that the non-civilians may not be individually attacked provided that the necessary precautions are taken.

6. Prohibited attacks
(See also infra, Conduct of Hostilities, III. Means and Methods of Warfare)

Introductory text
Under IHL, lawful methods of warfare are not unlimited. In particular, IHL prohibits certain kinds of attacks. The civilian population may never be attacked; this prohibition includes attacks the purpose of which is to terrorize the population. [4] IHL also proscribes attacks directed at civilian objects. [5] Even those attacks directed at a legitimate military objective [47] are regulated by IHL; such attacks must not be indiscriminate, i.e. the weapons utilized must be capable of being directed at the specific military objective and the means used must be in proportion to the military necessity. [17] The principle of proportionality prohibits attacks, even when directed at a military objective, if they "may be expected to cause incidental loss of civilian life, injury to civilians, damage to civilian objects, or a combination thereof, which would be excessive in relation to the concrete and direct military advantage anticipated." [18] This principle is the inescapable link between the principles of military necessity and humanity, where they pull in opposite directions. Although military advantage, which may be taken into account, is qualified, the principle of proportionality remains very difficult to apply, and any attempt to weigh the expected military advantage against the anticipated civilian losses or damage to civilian objects is inevitably dependent on subjective value judgements, especially when both probabilities, i.e. gaining the advantage and affecting civilians, can be gauged with less than 100% accuracy.

In addition, if a military objective is targeted and the principle of proportionality is respected, but civilians or civilian objects may nevertheless be affected by the attack, precautionary measures must be taken. [19] Finally, reprisals against civilians or civilian objects are prohibited under IHL. [20]

7. Loss of protection: The concept of direct participation in hostilities and its consequences

P I Art. 51(D) PII Art. 13(3) EHL, Rule 6

Introductory text

The concept of “direct participation in hostilities” is a cornerstone of the IHL on the conduct of hostilities, and its practical importance has grown as armed conflicts have become “civilized.” Both in international and non-international armed conflicts, civilians lose their protection against attacks (and their protection against the incidental effects of attacks, afforded to the civilian population as a whole) if and for such time as they participate directly in hostilities. Neither treaty nor customary law defines this concept. After a broad consultation of experts revealed an absence of agreement on certain crucial points, the ICRC tried to clarify several concepts in an “Interpretive Guidance” who is covered as a “civilian” by the rule prohibiting attacks except in case of direct participation; what conduct amounts to direct participation; the duration of the loss of protection; the precautions to be taken and the types of protection afforded in case of doubt; the rules governing attacks against persons who take direct part in hostilities; and the consequences of regaining protection. The first issue is probably the most controversial.

In international armed conflicts, treaty law is clear that everyone who is not a combatant is a civilian benefiting from protection against attacks except if he or she takes a direct part in hostilities. Members of the armed forces of a party to the international armed conflict who lost their combatant status (e.g., because they did not distinguish themselves from the civilian population) may also reasonably be excluded. Some scholars also exclude members of armed groups that do not belong to a party to the international armed conflict. In our view, such “fighters” are either civilians or covered by the rule applicable to a parallel non-international armed conflict, discussed below.

In non-international armed conflicts, the absence of any mention of “combatants” might lead one to deduce that everyone is a civilian and that no one may be attacked unless they directly participate in hostilities. However, this would render the principle of distinction meaningless and impossible to apply. In addition, common Article 3 confers protection on “persons taking no active part in hostilities, including members of armed forces who have laid down their arms or are otherwise hors de combat.” The latter part of the phrase suggests that for members of armed forces and groups, it is not sufficient to no longer take active part in hostilities to be immune from attack. They must take additional steps and actively disengage. On a more practical level, to prohibit government forces from attacking clearly identified fighters (and only while), the latter engage in combat against government forces is militarily unrealistic, as it would oblige them to react rather than to prevent, while facilitating hit-and-run operations by the rebel group. These arguments may explain why the Commentary on Protocol II considers that “[t]hose belonging to armed forces or armed groups may be attacked at any time.”

There are two ways of conceptualizing this conclusion. First, “direct participation in hostilities” can be understood to encompass the simple fact of remaining a member of the group or of keeping a fighting function in such a group. Second, members of armed groups, or, as the ICRC Interpretive Guidance suggests, those members of an armed group whose specific function is continuously to commit acts that constitute direct participation in hostilities, may not be considered “civilians” (and therefore do not benefit from the rules that protect them from attacks unless and for such time as they directly participate in hostilities). The latter suggestion ensures that membership of the armed group is distinguished from simple affiliation with a party to the conflict for which the group is fighting – in other words, membership of the political, educational or humanitarian wing of a rebel movement. In every case, however, in practice the difficult question arises as to how government forces are to determine (fighting) membership in an armed group while the individual in question does not commit hostile acts.

As for the question about what conduct amounts to “direct participation”, the ICRC Interpretive Guidance concludes, based on a broad agreement among experts, that the following criteria must be cumulatively met in order to classify a specific act as direct participation in hostilities:

1. the act must be likely to adversely affect the military operations or military capacity of a party to an armed conflict or, alternatively, to inflict death, injury, or destruction on persons or objects protected against direct attack (threshold of harm); and
2. there must be a direct causal link between the act and the harm likely to result either from that act or from a coordinated military operation of which that act constitutes an integral part (direct causation); and
3. the act must be specifically designed to directly cause the required threshold of harm in support of a party to the conflict and to the detriment of another (belligerent nexus).

9. Protected objects

Introductory text

In order to further safeguard the civilian population during armed conflicts, IHL protects specific objects from attack. It prohibits attacks against civilian objects, which are all objects not defined as military objectives.\[32\] Thus, a civilian object is one failing to contribute to military action because of, for example, its location or function, and because its destruction would provide no military advantage.

In addition, IHL grants some objects, most of which are civilian objects anyway, special protection. In addition to the protection afforded to them as civilian objects, special protection means that these objects may not be used for military purposes by those who control them and should therefore never become military objectives under the two-pronged test of the definition of military objectives. Second, even if they meet the test and are effectively used for military purposes, specially protected objects may only be attacked under restricted circumstances and following additional precautionary measures. For each category, the specific rules on these issues are different.

Specially protected objects include: cultural objects;\[33\]

b. specially protected objects

- cultural objects

P.I., Art. 52 [C.IHL, Rules 38-40]

“Total wars”, inter-religious strife and inter-ethnic conflicts are increasingly marked by the destruction of civilian objects, in particular cultural objects. Experience unfortunately shows that, far from being accidental or mere collateral damage, such destruction is very often clearly deliberate and part of the war effort.

The attempts to protect cultural objects against the effects of war date back to the adoption of Hague Convention IV of 1907. This protection has been considerably developed in the Hague Convention for the Protection of Cultural Property in the event of Armed Conflict and its 1954 and 1999 Protocols, in the 1949 Geneva Conventions and in Additional Protocols I and II of 1977.

Cultural objects are defined as “movable or immovable property of great importance to the cultural heritage of every people” (which include in particular monuments of architecture, archaeological sites, works of art, scientific collections and collections of books or archives) and as “buildings whose main and effective purpose is to preserve or exhibit movable cultural property” (such as museums, libraries or refuges intended to shelter cultural property).

On the basis of provisions applicable in both international and non-international armed conflicts, States parties are required to safeguard and respect cultural objects. Safeguarding comprises all the preventive measures to be taken in peacetime (which include the obligations to list, signal and mark the cultural objects with a distinctive emblem). Respect for cultural objects implies refraining from attacking them and prohibiting destruction.

Considered as civilian objects under special protection, cultural objects must not be attacked and may not be used for military purposes. Even if they are, they do not automatically become legitimate military objectives. Their immunity may only be waived in cases of “imperative military necessity”.

In spite of the many detailed provisions designed to guarantee their protection, cultural objects are still often collateral victims of modern conflicts. In most cases, their irreparable destruction often constitutes a serious obstacle to the restoration of normal relations between former belligerents.

10. Precautionary measures in attack

Introductory text

Under IHL only military objectives may be attacked.[8] Even such attacks, however, are not without restrictions. An attack must be cancelled if it becomes apparent that it is of a type that is prohibited[39] if circumstances permit, an advance warning must be given for those attacks which may affect the civilian population[26] in determining the objective of an attack, and when a choice is possible, the one causing least disturbance to the population shall be selected[41]. Furthermore, IHL requires those planning and deciding on an attack to take precautionary measures,[42] which means that the party of the forces’ own actions (and the proportionality between the additional protection for those forces and the additional risks for civilians and civilian objects when a certain means or method is chosen) is the availability and feasibility of alternatives; the necessity to keep certain weapons available for future attacks on targets which are militarily more important or more risky for the civilian population.

11. Precautionary measures against the effects of attacks

SC IV, Arts 18-19; P.I. Art. 58 [CIHL, Rules 22-24]

Introductory text

Contrary to Art. 57 of Protocol I [44] which lays down rules for the conduct to be observed in attacks on the territory under the control of the enemy, Art. 58 of Protocol I relates to specific measures which every Power must take in its own territory in favour of its nationals, or in territory under its control. These precautionary measures against the effects of attacks (which are often referred to as "Conduct of Defence") include three specific obligations which Parties to a conflict shall discharge "to the maximum extent feasible":

1. They must "endeavour to remove the civilian population, individual civilians and civilian objects under their control from the vicinity of military objectives". In most cases, only specific categories of the population (i.e. children, the sick or women) are evacuated; sometimes the entire population is evacuated. It should be underlined that, when carrying out such measures, occupying powers remain bound by the strict limitations spelled out in Art. 49 of Convention IV.
2. They must "avoid locating military objectives within or near densely populated areas". This obligation, which covers "both permanent and mobile objectives [..] should already be taken into consideration in peacetime."Practically speaking, the "other measures" are chiefly building shelters to provide adequate protection against the effect of hostilities for the civilian population and the training of efficient civil defence services.
3. They must "take the other necessary precautions to protect the civilian population, individual civilians and civilian objects under their control against the dangers resulting from military operations."Practically speaking, the "other measures" are chiefly building shelters to provide adequate protection against the effect of hostilities for the civilian population and the training of efficient civil defence services.

The wording, however, clearly indicates that these obligations are weaker than those of an attacker. They have to be taken only "to the maximum extent possible," and the defender only has to "endeavour to remove" the civilian population and "avoid" locating military objectives nearby. While responsibility for the protection of the civilian population against the effects of hostilities is shouldered by both the attacker and the defender, its weight is not equally distributed.

13. Zones created to protect war victims against the effects of hostilities
GC I, Art. 23; GC IV, Arts 14 and 15; P I, Arts 59 and 60; IHL, Rules 35-37

Introductory text
While IHL mainly tries to protect civilians and other categories of protected persons by obliging combatants to identify positively military objectives and to only attack them, respecting civilians wherever they happen to be, it also foresees different types of zones aimed at separating civilians from military objectives. The following table summarizes the different types of protected zones. They have in common the purpose of protecting war victims from the effects of hostilities (but not from falling under the control of the enemy) by assuring enemy forces that no military objectives exist in a defined area where war victims are concentrated. Thus, if the enemy respects IHL, the war victims run no risk of being harmed by the effects of hostilities. The risk with such zones is that they presuppose the willingness of the enemy to respect IHL. Hence, they are pointless against an enemy determined to violateIHL. On the contrary, such zones may then lead to the displacement of civilians and help the enemy target and abuse civilians by concentrating them in a confined location. Established under jus ad bellum, and meant to prevent certain areas and the war victims in them from falling into enemy hands.

III. Means and methods of warfare

(See also supra Conduct of Hostilities, II. The protection of the civilian population against the effects of hostilities, 6) Prohibited attack (and 10) Precautionary measures in attack)

HR, Arts 22-24

Introductory text

[We are deeply grateful to Dr. Théo Bourrouche, JHL consultant, who wrote his PhD thesis (L’interdiction des maux superflus: contribution à l’étude des principes et règles relatifs aux moyens et méthodes de guerre en droit international humanitaire, Graduate Institute of International and Development Studies, Geneva, 2008) on the concept of superfluous injury or unnecessary suffering, for this contribution.]

Under IHL the term “rules on means and methods of warfare” refers to a complex and large set of norms that are relatively fragmented and not systematically identified as such. While the term “means of warfare” commonly relates to the regulation of weapons, the term “methods” covers a broader array of rules depending on the definition considered. Traditionally, with regard to weapons, “means” encompasses weapons, weapons systems or platforms employed for the purposes of attack, whereas “methods” designates the way or manner in which the weapons are used. However, the concept of method of warfare also comprises any specific, tactical or strategic, ways of conducting hostilities that are not particularly related to weapons and that are intended to overwhelm and weaken the adversary, such as bombing, as well as the specific tactics used for attack, such as high altitude bombing. The term “methods” is rather new in treaty law. [45]

State practice offers examples of these two understandings of “methods”. The IHL governing means and methods of warfare contains two types of norms: general principles banning certain effects, and specific rules addressing particular weapons or methods. The distinction between “means” and “methods” is also related to the way IHL regulates the use of weapons. This branch of law either prohibits the use of certain weapons in any circumstances due to their inherent characteristics or it merely restricts and limits certain ways of using all weapons or certain specific weapons. For example, the prohibition of indiscriminate effects may be relevant in relation to the very nature of the effects of a weapon and at the same time for any type of weapon that can potentially be used indiscriminately.
Historically, prohibitions and limitations on means and methods of warfare were prompted by the concern to protect combatants, which saw the emergence of the principle prohibiting weapons causing superfluous injury or unnecessary suffering[62] and the ban on specific weapons, such as explosive projectiles weighing less than 400 grams[63] or dumb-dum bullets[64], as well as particular methods like killing or wounding treacherously.[65] Protocol I laid down elaborate principles and rules governing means and methods of warfare aimed at protecting the civilian population and objects, such as the prohibition of indiscriminate attacks, including those which employ a method or means of combat which cannot be directed at a specific military objective[66] or those which employ a method or means of combat the effects of which cannot be limited as required by the Protocol.[67] While most of the treaty norms pertaining to means and methods of warfare apply only in times of international armed conflict, international customary law applicable to non-international armed conflicts progressively evolved to contain the same rules in this regard.[68]

The overarching principle of IHL governing means and methods of warfare stipulates that the right of the parties to a conflict to choose means and methods of warfare is not unlimited.[69] The principles prohibiting the means and methods of warfare of a nature to cause superfluous injury or unnecessary suffering[62] and the principle prohibiting means and methods of warfare causing indiscriminate effects[61] are derived from this. Protocol I does not list the latter principle among the basic rules under the section on means and methods of warfare, but in the section on the protection of the civilian population against effects of hostilities. Indeed, this principle protects only civilians. Protocol I further prohibits means or methods of warfare which are intended, or may be expected, to cause widespread, long-term and severe damage to the natural environment.[62]

The relationship between the general principles and the specific rules on weapons remains a delicate issue, notably concerning the extent to which the latter merely crystallize the former. For example, the prohibition to cause superfluous injury or unnecessary suffering is considered by some to outlaw in and of itself certain weapons in the absence of a particular rule, while others assert that it must be translated by States into specific prohibitions before it can produce proper legal effects. The latter approach is questionable, however, as it appears to confuse the normative value of the principle per se with the issue of its interpretation and application to specific weapons. First, it is well recognized that a weapon not covered by a specific norm remains regulated by the general principles. Second, States do rely on the principles themselves, including to prohibit methods of warfare. Furthermore, the States parties to Protocol I are under an obligation to assess the legality of new weapons, means or methods of warfare, including in the light of the general principles.[61] General principles hence are legal rules with a normative value of their own.

Outside the Geneva Conventions and Protocols, IHL contains a series of prohibitions and limitations of use for specific weapons. Certain weapons are forbidden in all circumstances because of their characteristics[64] while others are only governed by restrictions in use[65]. As several treaty regimes are in place, a weapon can be both prohibited and its use limited[66].

Specific prohibited methods of warfare not particularly related to weapons primarily comprise the denial of quarter[67] and perfidy.[68] There is nevertheless no agreed list of specific prohibited methods, which may vary in State practice and according to scholars. Some include as specific prohibitions on methods of warfare aimed at spreading terror, reprisals, the use of human shields, and the manipulation of the environment. Conversely, others treat those methods as distinct prohibitions, separate from the issue of methods.

Besides norms on means and methods of warfare per se, IHL also contains additional obligations with regard to the choice of means and methods when planning and deciding on an attack with a view to avoiding, and in any event to minimizing, incidental loss of civilian life, injury to civilians and damage to civilian objects[69]. Those precautionary measures in attack, while being designed with reference to the protection of civilians and civilian objects, might be considered relevant for other types of means and methods of warfare to ensure respect for all relevant norms of IHL.

The exact content and scope of the term "method of warfare" within the principles and rules of IHL that refer to it remain unclear. Indeed, although the prohibition of superfluous injury or unnecessary suffering traditionally concerns the nature of means of warfare, it also covers the way to use weapons as well as specific methods with particular features. Contemporary challenges in the field of the regulation of means and methods of warfare include the issue of the interaction between the general principles in the case of a means of warfare that allows for better compliance with IHL rules protecting civilians but conversely may cause superfluous injury or unnecessary suffering to combatants.

2. Prohibited or restricted use of weapons

Introductory text

Lowering the level of cruelty between combatants and protecting those hors de combat and the civilian population in a more effective manner requires the regulation and, ultimately, the prohibition of certain means of warfare. To this end, several provisions of IHL applicable to international armed conflicts limit the means of warfare, i.e. weapons.[62] These provisions aim, in particular, to prohibit weapons causing...
“superfluous injury or unnecessary suffering”. In practice, the application of this basic rule is always a compromise between military necessity and humanity, as the principle of “superfluous injury or unnecessary suffering” has been interpreted as referring to harm that would not be justified by military utility, either because of the lack of even the slightest utility or because utility is considerably outweighed by the suffering caused. Although this standard may seem too vague to be effective, it has nevertheless led to efforts to prohibit and restrict certain conventional weapons[73] and weapons of mass destruction [74]. Although the Geneva Conventions and Additional Protocols limit means and methods of warfare (including those severely damaging the environment) [75] they neither prohibit nor restrict the use of any specific weapon; however, various other conventions do [76] Recognizing that it is much easier to prohibit a weapon’s use prior to its incorporation into a State’s arsenal, Protocol I also places constraints on the development of new weapons [77].

Quotation

3. Mr. PAOLINI (France) made the following statement:

[...]

[Al[Already in 1973, the French Government noted that the ICRC did not include any regulations on nuclear weapons in its drafts. In participating in the preparation of the additional Protocols, therefore, the French Government has taken into consideration only conflicts using conventional weapons. It accordingly wishes to stress that in its view the rules of the Protocols do not apply to the use of nuclear weapons.

SUGGESTED READING:

- “New methods and means”

As a measure of precaution, Art. 36 of Protocol I requires the States Parties to assess whether the use of any new weapon or of any new method of warfare that they develop or plan to acquire or deploy in operations is allowed by, and compatible with, international law.

The rapid evolution of new military technologies and the development of potentially devastating means and methods of warfare lends added resonance to this legal review.

The parties to Protocol I are obliged to conduct such reviews, but it would also be appropriate for States that are not parties to Protocol I to do so. This would allow them to verify that their armed forces act in conformity with international rules regulating the use of means and methods of warfare.

Art. 36 does not specify the practical modalities of such reviews, which are left to the parties to decide. It is understood that the legal review should cover the weapons themselves and the ways in which they might be used. Particular attention should be paid to the potential effect of the weapon concerned on both civilians (prohibition of indiscriminate effects) and combatants (prohibition of unnecessary suffering).

3. Prohibited methods of warfare

Introductory text

The concept of method of warfare encompasses any tactical or strategic procedure meant to outweigh or weaken the adversary.

The limitations or prohibitions to resort to specific methods of warfare stipulated in IHL are predicated on three premises:

- the choice of the methods of warfare is not unlimited;
- the use of methods of a nature to cause unnecessary suffering or superfluous injury is forbidden;
- the only legitimate object of war is to weaken the military forces of the enemy.

Contemporary IHL forbids, for instance, methods of warfare involving terror,

starvation,

reprisals against protected persons and objects,

pillage,

the taking of hostages,

enforced enrolment of protected persons,

and deportations.

Under the specific heading “prohibited methods of warfare”, two methods of warfare are usually discussed, namely perfidy and denial of quarter.

Unlike ruses of war, which are lawful, perfidy is outlawed in IHL. Ruses of war are intended to mislead an adversary or to induce him to act recklessly. Perfidy, on the contrary, invites the confidence of an adversary and leads him to believe that he is entitled to or is obliged to provide protection under the rules of IHL.

The main aim of the prohibition of the denial of quarter is to protect combatants when they fall into enemy hands by ensuring that they will not be killed. The objective is to prevent the following acts:

- to order that there shall be no survivors,
- to threaten the adversary therewith,
- to conduct hostilities on this basis.

Most cases of perfidy and denial of quarter are grave breaches of IHL and hence war crimes.

4. Cyber warfare

The term 'cyber warfare' can be defined as the means and methods of warfare that rely on information technology and are used in situations of armed conflict. The second part of the definition is important: ‘HIL will only apply to cyber operations occurring during – or triggering by themselves – an armed conflict.’ The debates on whether a cyber-attack may amount to a ‘use of force’ or even an ‘armed attack’ are ongoing. While some states consider the cyber-attack a new threat to国际 security, others argue that attribution alone can trigger the applicability of the IHL of international or non-international armed conflicts. Determining the beginning of an armed conflict itself remains tricky in situations where cyber-attacks are employed, alone, or as part of a broader strategy. It is argued that the respective thresholds for international and non-international armed conflict should also be applied in such situations. Even then, in practice, the nature of information technology often makes it difficult to attribute an attack to a State or an armed group (which is important to differentiate international from non-international armed conflicts) or to determine the existence of a sufficiently organized armed group (which is necessary to trigger IHL of non-international armed conflicts).

Once the applicability of IHL is triggered, the question becomes one of the adaptability of the rules on the conduct of hostilities. Do cyber attacks amount to ‘attacks’ in the sense of Article 49 of Protocol I? Is it necessary for them to result in physical consequences such as destruction of objects or injury or death of persons? Some argue that acts resulting in mere destruction of data, i.e. interference with information systems, should also be considered as amounting to attacks at least if they have a considerable effect upon the targeted party. This question is conceptually distinct from the above-mentioned question of when a cyber operation triggers an armed conflict, but similar elements may be decisive for both answers.

If considered an attack under the IHL meaning, a cyber operation will have to comply with the principles of distinction, proportionality and precautions.

Looking at distinction first, the principle is put at stake by the nature of information networks: with most military networks relying on civilian infrastructure (optic cables, satellites, etc.), the latter virtually becomes a ‘dual use’ object with both civilian and military functions, leading to increased difficulties in effectively identifying military targets. In addition, while destruction of information is at the centre of the majority of cyber operations, military objectives are circumscribed to objects under IHL. As a consequence, the question arises of whether data, which is by definition intangible, can ever be considered a legitimate target. With regards to persons, may a hacker operating for a party to an armed conflict be considered as directly participating in hostilities?

Second, applying the principle of proportionality to cyber operations is not an evident task either. The interconnected nature of cyber space means that any act may result in infinite reverberating or ‘knock-on’ effects, which may easily be considered disproportionate in relation to the concrete and direct military advantage anticipated. Another recurring question concerns the attacks that do not result in any destruction of objects, but only in mere inconvenience for civilians, mainly because civilian objects are rendered inoperative for a certain amount of time. Inconvenience not being included in the definition of proportionality, a majority of experts conclude that ‘inconvenience, irritation, stress, or fear […] do not qualify as collateral damage because they do not amount to “incidental loss of civilian life, injury to civilians, damage to civilian objects”’.

Finally, as one can imagine, the issue of interconnectedness also affects the principle of precaution, in particular the obligation for parties to take passive precautions in segregating between military objectives and the civilian population and civilian objects.

In the light of such new challenges, legal experts met in Tallinn to discuss whether and how the rules of IHL could actually be applied to cyber operations. This resulted in the Tallinn Manual on the International Law Applicable to Cyber Warfare [86], which brings some clarification to some of the issues mentioned here as well as to numerous other ones, and at least presents the remaining controversies. In the end, it is essential to continue the discussion in order to determine whether the traditional rules of IHL provide sufficient protection to civilians from the effects of warfare, keeping in mind the enormous humanitarian impact that some cyber operations may have in the real world. It is important to remember that this is one of the few fields in which the existing rules of IHL are indeed inadequate, because of the completely different environment in which cyber operations are conducted and because they are necessarily either overt or under-inclusive on some issues. Some such new regulation is in force; the existing rules have anyway to be applied according to their object and purpose. The Tallinn Manual makes many useful suggestions in this respect.
